

- **What was the most impactful thing(s) you learned this week and why do you think so?**

I used to feel a lot more confident with grid than flexbox. But after this week I feel I am super confident in both. I love to learn new tools and apply this knowledge in my projects. I am excited to keep learning new things.

- **What questions do you have about this week's chosen topic(s) and/or exercises (first-time students) or websites you are working on (repeat students)?**

I feel everything about the topic we learned this week was super straightforward. I do have a questions about the CSS Zen Garden project. Are we suppose to work in that website already? Or should we wait for more instructions about it?

- **Would you like specific feedback from your instructor? If so, what things would you like feedback on? (Please contact your instructor or use their method (such as Canvas calendar, email, Slack, or MS teams) to meet with your instructor or find out if they are having office hours.)**

I dont have any feedback for my professor. I know that if I have any question to him, I can slack him and he will answer and be willing to help.

- **Where would you go next to learn more about this week's topic(s)? Give 2-3 links to resources that look promising to help answer the questions you indicated in the quiz question above.**

1. <https://flexbox.help/>
2. <https://css-tricks.com/snippets/css/a-guide-to-flexbox/>
3. https://www.w3schools.com/css/css3_flexbox.asp

- **Did you participate with the class on Microsoft Teams or Slack? (You can participate by asking a question, answering a question, or sharing a resource you've found. Or you can share your thoughts on what you're learning this week. Or you can answer any questions your instructor**

might have given in their announcement.)

I did. I meet with Joshua who is in my team. We talked about the group project and also about the assignment for this week

- **Please rate your success with learning and this week's work on a scale of 1 to 4.**

4. I completed everything that was required on time.

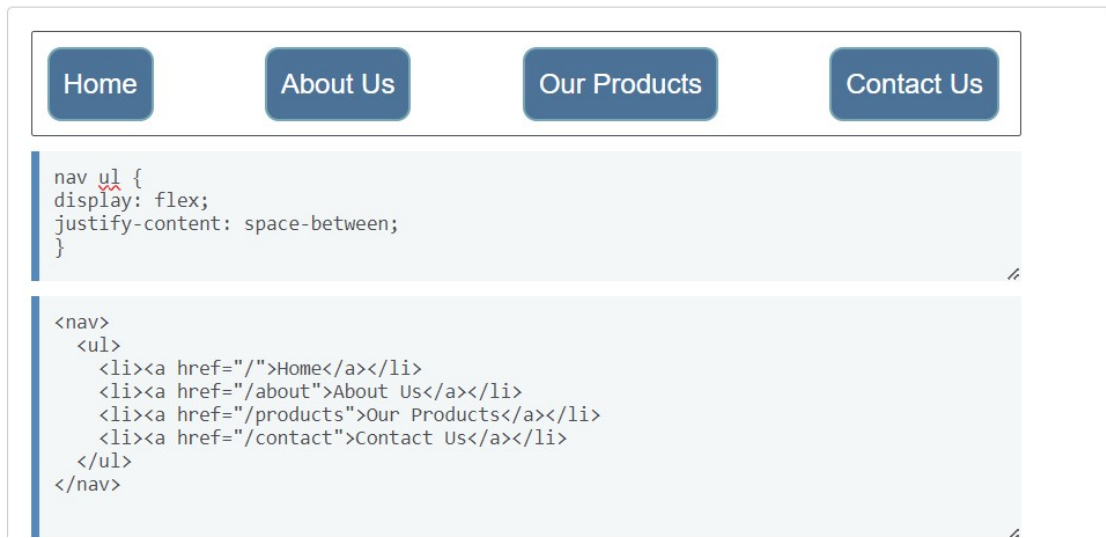

- Please rate yourself at the level you feel most closely matches your learning; 1 is the lowest rating and 4 is the highest.
- Feel free to use decimals if you feel you must.
- Your answers to questions 1 through 4 are your justification for your rating.
- This is most of your grade for your reflection, you also receive one point for submitting the other required items.
 - Your instructor won't grade your assignment until you submit the required items (screenshot, zipped files, etc.)
- If your instructor disagrees substantially with your rating, they can raise it or lower it to signal to you their expectations.
- If your instructor lowers your rating, your instructor might contact you to arrange a meeting to see how they can help you. Feel free to reach out to them as well.

Screenshots of my assignments:

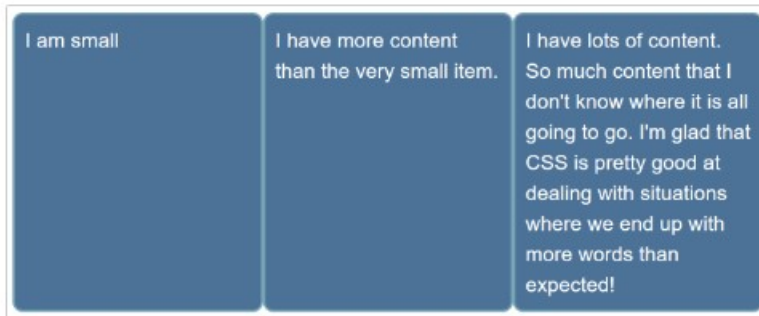

Your final result should look like the image below:

I am small

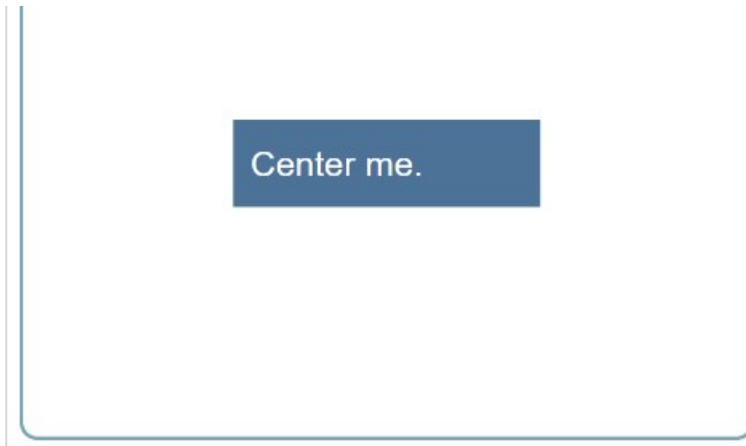

I have more content than the very small item.

I have lots of content. So much content that I don't know where it is all going to go. I'm glad that CSS is pretty good at dealing with situations where we end up with more words than expected!

```
ul {  
  display: flex;  
  flex: 200px;  
  flex: 1 200px;  
}  
  
li {  
  flex: 2 200px;  
}
```

```
<ul>  
  <li>I am small</li>  
  <li>I have more content than the very small item.</li>  
  <li>I have lots of content. So much content that I don't know where it is all going to go. I'm glad that CSS is pretty good at dealing with situations where we end up with more words than expected!</li>  
</ul>
```

Reset

Center me.

```
.parent {
  display: flex;
  justify-content: center;
}

.child {
  align-self: center;
}
```

```
<div class="parent">
  <div class="child">Center me.</div>
</div>
```

Task 4

In this task, we want you to arrange these items into rows as in the image below:

Try updating the live code below to recreate the finished example:

Turnip

greens

yarrow

ricebean

rutabaga

endive

cauliflower

sea lettuce

kohlrabi

amaranth

```
ul {
  display: flex;
  justify-content: space-between;
  flex-wrap: wrap;
  flex: 600px;
}
```

```
<ul>
  <li>Turnip</li>
  <li>greens</li>
  <li>yarrow</li>
  <li>ricebean</li>
  <li>rutabaga</li>
  <li>endive</li>
  <li>cauliflower</li>
  <li>sea lettuce</li>
  <li>kohlrabi</li>
</ul>
```

FLEXBOX FROGGY

◀ Level 2 of 24 ▶

Use `justify-content` again to help these frogs get to their lily pads. Remember that this CSS property aligns items horizontally and accepts the following values:

- `flex-start`: Items align to the left side of the container.
- `flex-end`: Items align to the right side of the container.
- `center`: Items align at the center of the container.
- `space-between`: Items display with equal spacing between them.
- `space-around`: Items display with equal spacing around them.

```
1 #pond {
2   display: flex;
3   justify-content: center
4 }
5
6
7
8
9
10
```
